Thank you for choosing our products

DewZap is a Dual Channel Dew Heater Controller. Easy to use, powerful and very compact, is your best companion against the dew during long astro-nights. Controller has two individual RCA outputs. You can adjust every output by turning each knob on the side of the device. Controller has been built with modern digital electronics and fully supports PWM duty cycle control. Powerful mosfets inside the controller provide 5 Amps of current per channel.

What is inside the box.
1 x DewZap Controller

Operating Instructions

- Plug in your heaters into the PWM outputs
- Connect 12V DC power supply to the DewZap.
- Turn the two knobs to adjust the power output of the Dew A or Dew B channel. LEDs will dim light per dew channel

*Hint: You can also connect your 12V flatbox to one of the dew outputs to dim its brightness.

Technical Specifications

Supply Voltage	12 - 13.8 V DC
Output	Same input voltage in Pulse Width Modulation Duty Cycle
Channels	2 x Digital. Can support max 5 Amps per channel
Power Outlets	2 x RCA
Power Input Connector	2.1mm Centre Positive Socket
Dimensions	66 mm x 66 mm x 28 mm

Device is covered by two (2) years warranty
